

EUREKA 9 – What's New

# INDEX

1. Eureka Internal Reviewer
2. Editor with Colored Syntax
3. Enhanced JOG for CNC Simulation
4. Laser Scan Module
5. Playlist Module
6. Enhanced Eureka Additive Module with 3+2 Strategy
7. Collision Detection Diagnostic
8. New Tool Interference and Near Missing Management
9. Cutting Conditions Control on Turning
10. Saving STL Files with an Offset
11. PDF Report
12. Eureka Batch

# Eureka Internal Reviewer

- Go forward/backward in the simulation updating the stock and reaching warnings/errors very fast
- Slider can be dragged to navigate in the simulation history

# Editor with Colored Syntax

- Color your ISO and APT code to better understand the syntax
- Define color for each command
- Fully customizable

```

908 M3
909 PLANE SPATIAL SPA0 SPB0 SPC0 STAY
910 PLANE RESET STAY
911 CYCL DEF 7.0 DATUM SHIFT CANCEL
912 CYCL DEF 7.1 X0
913 CYCL DEF 7.2 Y0
914 CYCL DEF 7.3 Z0
915 L A-90 C0 R0 FMAX
916 CYCL DEF 7.0 DATUM SHIFT
917 CYCL DEF 7.1 X0
918 CYCL DEF 7.2 Y40
919 CYCL DEF 7.3 Z0
920 PLANE SPATIAL SPA-90 SPB0 SPC0 STAY
921 L X-137,613 Y156,944 FMAX
922 L Z2 FMAX
  
```

# Enhanced JOG for CNC Simulation

- Powerful functions to manage the rotary axes (CNC machines)

Heidenhain JOG

Step:

- +

X	<input type="text"/>	mm	<input type="button" value="←"/> <input type="button" value="→"/>	<input type="text" value="0"/>	mm
Y	<input type="text"/>	mm	<input type="button" value="←"/> <input type="button" value="→"/>	<input type="text" value="-10"/>	mm
Z	<input type="text"/>	mm	<input type="button" value="←"/> <input type="button" value="→"/>	<input type="text" value="244"/>	mm
A	<input type="text"/>	deg	<input type="button" value="←"/> <input type="button" value="→"/>	<input type="text" value="0"/>	deg
C	<input type="text"/>	deg	<input type="button" value="←"/> <input type="button" value="→"/>	<input type="text" value="0"/>	deg

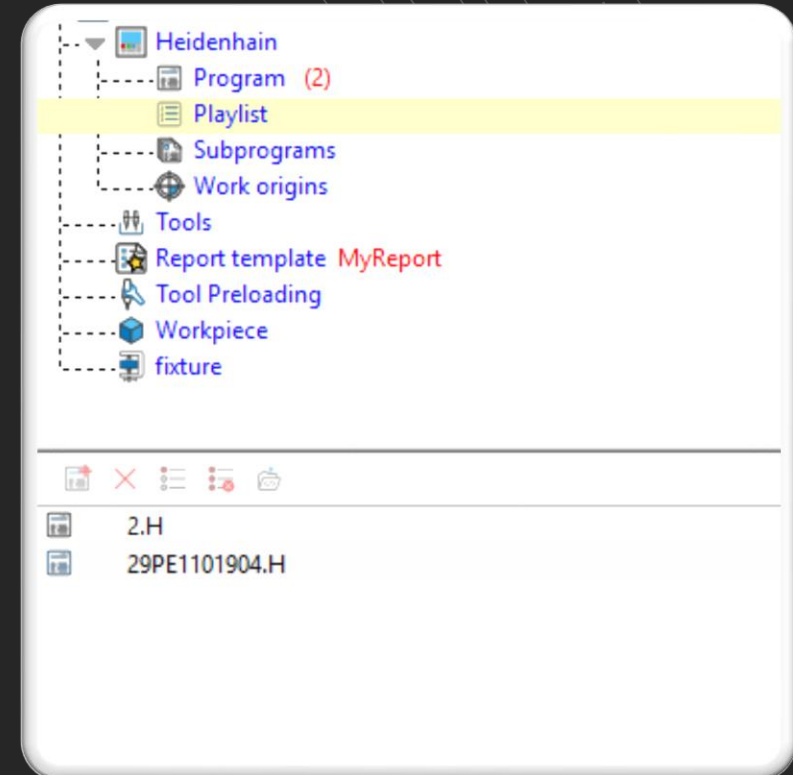

# Laser Scan Module

- Simulate the scan process
- Configure the laser blade as the actual one
- Analyze the workpiece to detect shadowed areas
- Detect overlapped zones

# Playlist Module

- Possibility to load more than one program
- Auto-functions at the end of the program
- Switch automatically to the next program

# Enhanced Eureka Additive Module with 3+2 Strategy

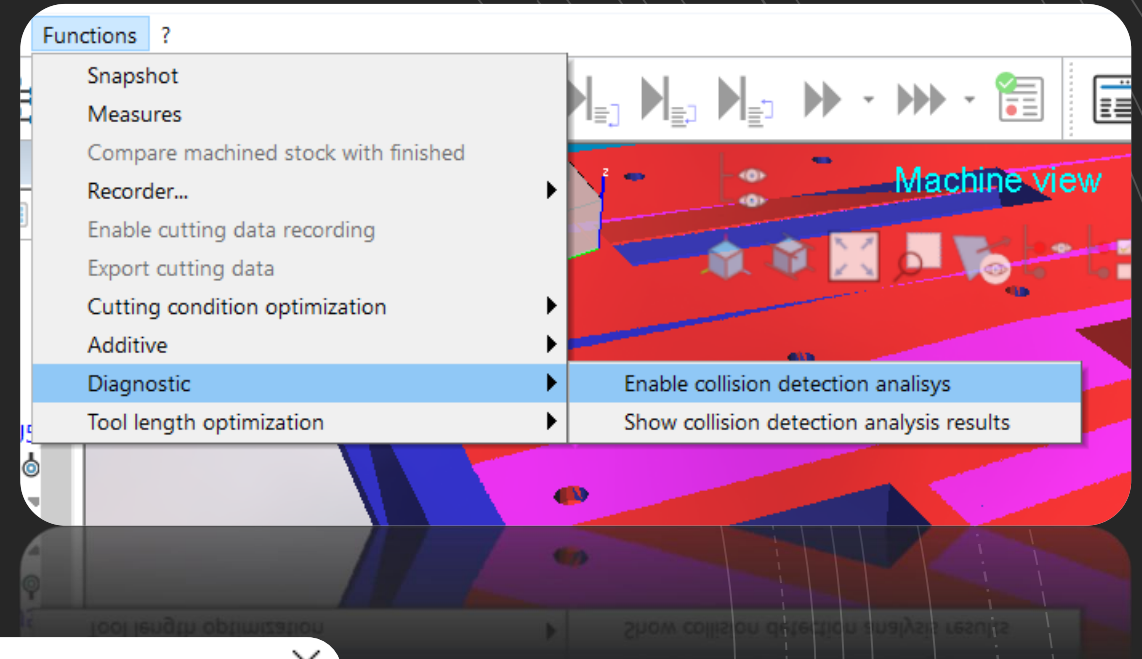

- Use the 4th and 5th axis to optimize the slicing
- Define the slicing direction, inside the workpiece parameters
- Define one or more slicing directions
- All inside Eureka

# Collision Detection Diagnostic

- Identify which 3D models slow down the simulation in order to optimize performances

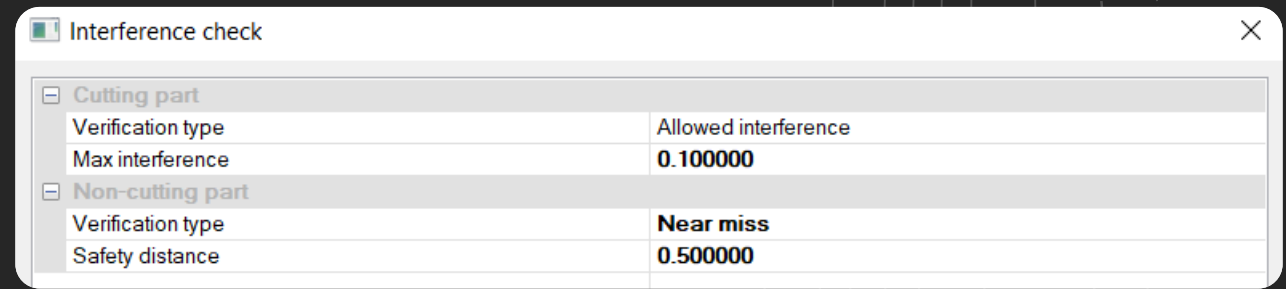

CPU	Shape1	Shape2
<div><div></div></div>	J1	PMP_2
<div><div></div></div>	J2	PMP_1
<div><div></div></div>	J3	J5
<div><div></div></div>	J5	Cylinder

- Great influence on performances

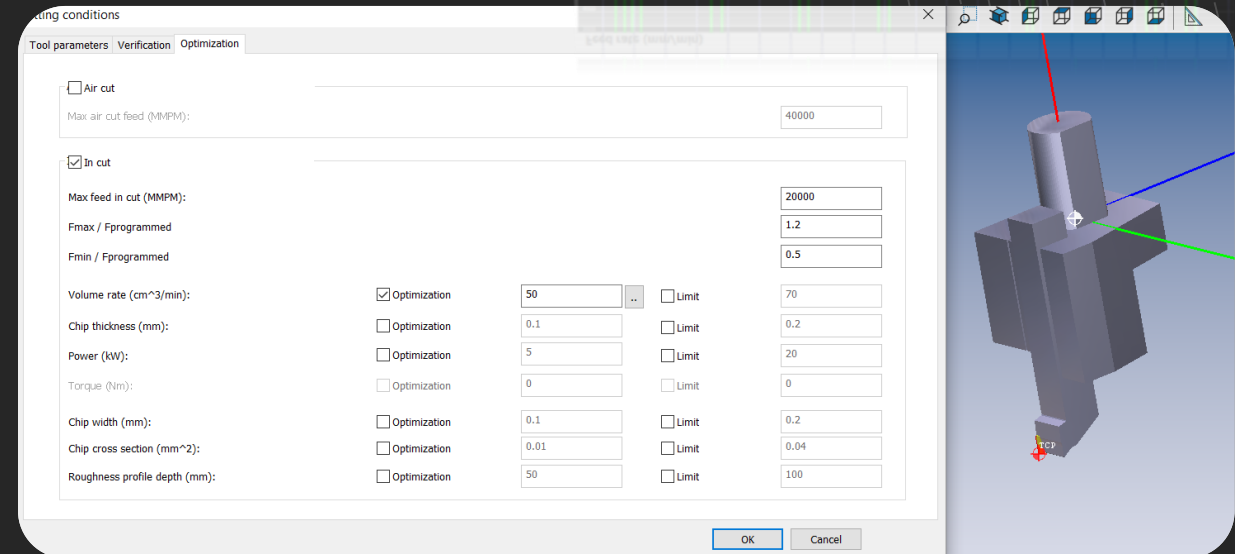

# New Tool Interference and Near Missing Management

- Define how much the tool is allowed to plunge inside the workpiece  
OR  
how close the tool can be to the workpiece before raising a warning
- Different parameters for the cutter and the finished part
  - Cutting part
  - Non-cutting part

# Cutting Conditions on Turning

- Toolpath Analysis and Optimization now available also for Lathes and Mill-Turn Machines

# Save STL Files with an Offset

- Add an offset to a 3D Model and save the resulting STL file

# PDF Report

- Machining time
  - Rapid
  - Feed
  - Tool change
  - Head change
  - Etc...
- Information for each tool
  - Rapid
  - Feed
  - Etc...
- Origins

# Eureka Batch

- Simulate in background
- More than one “.epf” file
- Each simulation can output
  - Report
  - Evdf (Eureka Mobile)
  - Evpf (Eureka Viewer Pro)
  - Stock/design comparison results
  - Log files

Eureka authorized reseller
