

## GoEngineer Acquires SKA, Latin America's Leading SOLIDWORKS Reseller

*Acquisition Extends GoEngineer's Full-Service Engineering Partner Model to Latin America*

**SALT LAKE CITY, Utah — May 13, 2026** — GoEngineer, the world's largest full-service engineering solutions provider and premier authorized partner for Dassault Systèmes, Stratasys, Bright Laser Technologies, and other leading technology vendors, today announced the acquisition of SKA, Latin America's leading SOLIDWORKS and engineering technology reseller. SKA will operate as *SKA, a GoEngineer company*. The acquisition extends GoEngineer's presence into Latin America while strengthening its capabilities across manufacturing software, shop-floor technologies, automation, and product development.

Founded in 1989 and headquartered in São Leopoldo, Brazil, SKA serves thousands of customers across manufacturing, aerospace, medical, and industrial end markets. In addition to its leadership position in SOLIDWORKS, SKA brings meaningful capabilities in manufacturing execution systems (MES), machining automation, sheet metal, additive manufacturing, and engineering workflow integrations.

The acquisition expands GoEngineer's ability to support its customers across the full product lifecycle – from design and engineering through production and factory-floor operations. It also extends its technical expertise and customer support capabilities throughout the Americas, further reinforcing its role as the leading engineering partner to its customers. This acquisition follows GoEngineer's 2025 expansion into Canada and represents the company's first presence in Latin America and the Southern Hemisphere. The transaction is a reflection of the growing global demand for the kind of deep, full-service engineering partnership that GoEngineer has built.

*"GoEngineer has spent more than 40 years building something that no other organization in this space has: the certified experts, the training infrastructure, the additive manufacturing capability, the proprietary customer technology, and the innovation capacity to be a true global end-to-end engineering solutions partner. Bringing SKA into the GoEngineer family means that engineers and manufacturers in Brazil and throughout Latin America will now have access to that same world-class experience. This is a statement about what GoEngineer is becoming: the global standard for what an engineering solutions partner should be."*

— Justin Winter, CEO, GoEngineer

What differentiates GoEngineer extends beyond the breadth of its vendor portfolio. As a full-service engineering solutions partner, the company combines best-in-class software and hardware from more than a dozen leading technology vendors with significant in-house technical capabilities, including hundreds of certified specialists, a national training infrastructure spanning classroom, online, and on-site delivery, and an additive manufacturing services bureau operating across FDM, PolyJet, SLA, SLS, and metal 3D printing technologies.

SKA brings a complementary set of solutions and profile of excellence to the combined organization. SKA's management team and local culture will remain fully intact as the business operates as SKA, a GoEngineer company, ensuring continuity for customers and partners throughout Brazil.

*"This is a strategic step that launches SKA into a new era of growth and internationalization without sacrificing our DNA. We keep our team, our culture, and our commitment to the development of Brazilian industry. The connection with GoEngineer expands our vision of the future and strengthens our capacity to accelerate delivery and generate value for our customers."*

— Siegfried Koelln, CEO, SKA

The combination of GoEngineer and SKA creates a uniquely powerful resource for engineering professionals across the Americas. Customers in Latin America gain access to GoEngineer's expanded offerings and technical depth, while multinational manufacturers benefit from coordinated support delivered by two aligned partners across North and South America.

## About GoEngineer

GoEngineer is the world's largest full-service engineering solutions provider, serving tens of thousands of customers across high-tech, medical, aerospace, energy, and industrial manufacturing. GoEngineer supports the entire product lifecycle, from strategy and system implementation to operational optimization and hands-on engineering execution, helping organizations innovate faster and operate more efficiently.

With more than 40 years of experience and operations across the United States, Canada, and

Latin America, GoEngineer delivers a depth of capability and partnership that no other engineering solutions provider can match. Learn more at [goengineer.com](http://goengineer.com).

### **About SKA**

SKA is Latin America's leading provider of SOLIDWORKS and engineering technology solutions, serving thousands of companies from twelve regional offices across Brazil. Founded in 1989 and headquartered in São Leopoldo, SKA has built a four-decade legacy of excellence in CAD, CAM, MES, simulation, 3D printing, and product development services. As part of the GoEngineer family, SKA now offers customers in Latin America access to a global ecosystem of resources, expertise, and innovation. Learn more at [ska.com.br](http://ska.com.br).
